Low-Fi Prototype of Cart Page:

- I tried to match with real-world food shopping cart expectations as much as possible while preserving the initial design/aesthetic choices I made (Match to Real World, Minimalism and Aesthetic)
- Made items and boxes similar in layout to other pages for easy navigation (Consistency & Standards) - all the buttons have the same shape, font, and color so they are easily distinguishable
- In the cart item box, I included:
    - Picture of item (I used a filler picture in this prototype)
    - Edit and delete button (no Javascript functionality in this prototype)
    - Item details such as flavor, glaze, and quantity (not linked in this prototype)
    - Save to Favorites button (no Javascript functionality in this prototype)
